

Cover Film for Thermal/Acoustic Insulation

Description/Application:

- Lightweight, innovative, technologically advanced, metallic fire barrier cover film designed specifically for aircraft fuselage thermal/acoustic insulation blankets/systems
- Ideal for applications requiring metallic cover film (high temperature/high stress areas)
- High performance fire barrier cover film designed to meet Aircraft Fuselage Burnthrough Regulation
- Melt adhesive facilitating heat and/or ultrasonic sealing
- Resists the spread of fire in thermal acoustic insulation blankets and provides more protection for passengers/crew/cargo in the event of an in-flight and/or post-crash fire

Features/Benefits:

▶ **LIGHTWEIGHT (METALLIC)**

Used in all aircraft weight reduction applications

▶ **PEEK BASED COVER FILM**

Excellent mechanical/chemical resistance properties retained in high temperature conditions.

▶ **STRONG/FLEXIBLE/DURABLE**

Woven & non-woven combination, bendable, abuse-resistant, will not delaminate, will not peel, tear/scratch resistant.

▶ **FIRE, SMOKE & TOXICITY TESTING**

Environmentally friendly with little or no gas emitted.

▶ **COST EFFECTIVE**

Easy to use/install, less repairs/wastage.

▶ **BURNTHROUGH TIME**

Long "no burnthrough" time (with low heat flux readings!).
